PARTNERS

A network is made up of an interconnected system of components.

The strength of the network lies in the strength of these components.

This is why SKILLAB believes in the strength of partnerships and in pooling the knowledge, experience and methods of each individual component.

Over the years, SKILLAB has developed a series of ventures and projects involving a series of prestigious partners from both home and abroad, including those acquired from AMMA and the Industrial Union.

In Italy these are *Confindustria*, *Federmeccanica*, employment associations, research centres, universities, polytechnics, chambers of commerce, *Fondirigenti*, *Fondimpresa*, etc., who alongside a network of international operators, are all working towards the same goals:

- to put people in touch with each other, to encourage the exchange of know-how, to create culture
- to offer companies a diversified number of services, experience and top level best practices

EUROPEAN PARTNERS

(Insert logos and links of Main European partners)

A common strategy of cooperation with industrial associations, universities and international research centres in order to create a real European network aimed at spreading a new company culture that can face the challenge of globalization.
